The Company's activities and events of note for the past quarter are as follows:

- The Company announced on October 28, 2013 that it had completed a conceptual pit analysis and applied the findings to a pit-constrained resource estimate for the Crucero Gold Project, and that an updated and amended technical report supporting the Crucero Gold Project resource estimate had been filed on SEDAR (see www.sedar.com for a complete copy of the related Technical Report);
- On August 27, 2013, the Company announced that it had received approval of a Category II Environmental Impact Assessment - Semi Detailed for the Crucero Gold Project from the Ministry of Energy and Mines of Peru ("MEM");

- On July 2, 2013, the Company announced the results of its most recent campaign of metallurgical recovery testing on the mineralization from the A-1 Zone at its Crucero Gold Project. Summary results were from tests performed on two composite samples reflecting the two distinct mineralization types within the Crucero mineralization envelope. The wide range of recovery results reflect the suite of tests performed and the treatment options analyzed. Depending on types of minerals, their concentration and grind size, leach extraction of 60-75% gold was achieved. Diagnostic leach tests at ultrafine grinds showed leach extraction of 89% and 94% for the two composites;

Outlook

The Company's primary priorities are to continue its mineral exploration and development activities on the Crucero Gold Project, to explore on and review potential options regarding the Invicta Gold Project, and to maximize the potential return on its investment in Southern Legacy Minerals. The Company will also remain vigilant towards the potential acquisition of interests in other mineral resource properties in Peru that are assessed by management to be of merit.
